

- ✓ Set up a new folder for the project and opened it in VS Code
- ✓ Created and activated a virtual environment for Django
- ✓ Installed Django inside the environment
- ✓ Verified the Django version was correct
- ✓ Started a Django project named config
- ✓ Launched the development server and confirmed the welcome page appeared
- ✓ Initialized Git and pushed the project to a GitHub repository
- ✓ Generated an app named core
- ✓ Added core to the list of INSTALLED_APPS in settings
- ✓ Wrote a view that outputs "Hello, EVSU!"
- ✓ Set the root URL to call this view
- ✓ Opened the browser to check the result
- ✓ Created a templates directory with base.html and home.html
- ✓ Added a view that renders home.html with a page title
- ✓ Updated the URL configuration to include the home view
- ✓ Verified that the home page displayed correctly
- ✓ Designed an About page with a button or link
- ✓ Displayed my student ID and full name on the About page
- ✓ Configured a URL and view for the About page
- ✓ Confirmed the About page worked as expected

✓ Wrote checklist.txt and reflection.md

✓ Committed all changes and pushed them to GitHub
